

PAULA MAGED HABIB

SOC ANALYST

paulamagedcyber@gmail.com • 01289990678 • Cairo, Egypt • LinkedIn • GitHub • Portfolio

PROFESSIONAL SUMMARY

Cybersecurity student with a strong focus on practical Blue Team operations, Incident Response, and security monitoring. Actively building hands-on experience through Blue Team Labs Online, cybersecurity labs, and independent security projects involving SIEM workflows, network traffic analysis, and automated response architectures. Committed to continuous learning and long-term growth in defensive cybersecurity operations.

TECHNICAL PROFICIENCIES

Core Skills: SIEM & Log Analysis, Network Traffic Analysis (NTA), OS Proficiency, Scripting, & Automation

Security Tools & Frameworks: Wazuh, Splunk, Zeek, Suricata, Velociraptor, Wireshark, Nessus, Nmap

Operating Systems: Linux Mastery, Windows & Active Directory, Containerization & Virtualization

WORK EXPERIENCE

IT Intern — AlDahra

Aug 2025 - Sep 2025 | Cairo

Administered network security controls, monitoring firewall rules and managing Active Directory (AD) Group Policy Objects (GPOs) and permissions to enforce secure access. Engineered a REST API for real-time data ingestion and visualization, demonstrating strong backend development and integration skills highly applicable to security automation. Provided Tier 1 technical support and network troubleshooting, resolving server infrastructure issues to ensure high availability for enterprise operations.

SOC Intern — Trios Cyber

Sep 2026 - Oct 2026 | Remote

Deployed and configured a multi-node Wazuh SIEM lab environment on Ubuntu Server, establishing end-to-end log collection, custom correlation rules, and real-time alert monitoring. Analyzed enterprise network traffic and system logs using Wireshark, Suricata, and Zeek to identify indicators of compromise (IoCs) and map attacker behavior to the MITRE ATT&CK framework. Investigated endpoint telemetry and Windows/Linux system logs during simulated security incidents, performing basic alert triage, root-cause analysis, and case documentation via TheHive. Automated threat detection workflows by integrating SIEM alerts with external intelligence sources using Python scripts and REST APIs.

SOC Intern — Archon Vanguard

Sep 2026 - Oct 2026 | Remote

Completed a hands-on cybersecurity internship focused on Security Operations Center (SOC) workflows, threat detection, and incident response methodologies. Analyzed network traffic and protocols using Wireshark to investigate common OSI model attacks, intrusion detection systems (IDS/IPS), and firewall controls. Performed deep log analysis using Windows Event Viewer, Sysmon, and system logs to identify suspicious behavior, malware types, and "Living off the Land" techniques. Investigated phishing attempts, web security anomalies (such as web shells and DDoS), and initial access/persistence vectors across both Windows and Linux environments. Applied defensive frameworks including the Cyber Kill Chain and MITRE ATT&CK to structure threat detection, alert triage, and incident response lifecycles.

KEY PROJECTS

SOAR Ecosystem & Automation Pipeline

Designed a modular SOAR ecosystem with automated IR playbooks, vulnerability enrichment, and centralized alert triage.

AI-Assisted Network Forensics & Intrusion Detection

Developed an ML-powered PCAP analysis pipeline and packet-indexing platform to detect anomalies and reconstruct simulated network intrusions.

EDUCATION

El Sewedy University of Technology — Bachelor of Technology in Networking & Cybersecurity - 4.1/4.3

2028

CERTIFICATIONS

- Networking Basica (Cisco)
- Cyber Threat Management (Cisco)
